

FUZZ WAR

The FUZZ WAR is the ultimate sustain fuzz. It's clear and articulate so you can hear the nuances of your playing and also produce a super thick wall of fuzz.

Volume: Controls the overall output level.

FUZZ: Controls the gain of the fuzz circuit. At its lowest setting the pedal acts as a tone shifter. As the fuzz knob is turned up it sweeps from a booster to an overdrive to a thick distortion to a full on blown out war of fuzz.

TONE: A specially designed multi-curve shaping filter which changes the timbre of the pedal from super deep bass sludge to screaming highs.

The FUZZ WAR runs on a 2.1mm negative center 9V AC to DC adapter or 9V battery.
