

REVERBERATION MACHINE

The Reverberation Machine is a synthetic atmosphere creator. Use the effect on any instrument to add depth and simulate different environments. Experiment and combine a variety of settings to obtain the perfect ambiance for your sound.

- VOL** - Controls the master output volume.
- △** - Altitude control. This is similar to gain. Turn this up to bring on a more wide open and distorted sound.
- VERB** - Blends in the amount of reverb.
-  - Dark cavernous reverberation.
-  - Bright shimmering reverberation.

* when the altitude and verb controls are turned past 12 o'clock the pedal can produce potentially harmful volumes, white noise, and other artifacts.

WHEN BATTERY LOW LED MAY REMAIN LIT AND NOISE CAN OCCUR.

The Reverberation Machine draws 54 mA with a standard 9V Battery. It also operates on a positive ring, negative tip 9 Volt DC Adaptor.
